

Turn on your Laptop

Connect to Internet (Check your connection)

Launch putty (Windows) and terminal (macOS/Linux)

High-Performance Computing (HPC) Cluster

- High-performance computing (HPC) are supercomputers or cluster system used to solve advance problems.
- Frequently user in science, technology, engineering, and mathematics (STEM).
- Integrates parallel and distributed computing.
- IITD has HPC Cluster with 634 total nodes (CPU: 417, GPU: 217).

Anatomy of HPC Cluster
